

Highly Pathogenic Avian Influenza H5 events

25 May - 25 June 2009

Note: A map of the latest 6 months confirmed outbreaks is also available at the end of this document.

WHAT'S NEW in this issue?

ASIAN REGION**Cambodia**

- Negative results from HPAI surveillance

Indonesia

- Suspected case of H5N1 AI infection in human (South Jakarta)

Viet Nam:

- Confirmed H5N1 HPAI outbreak in poultry (Quang Ninh)

EUROPEAN REGION**Russian Federation:**

- Confirmed cases of H5N1 AI infection in wild birds (Respublika Tyva)
- Suspected H5N1 AI seropositive wild birds (Altay Kray)

NOTE: UPDATED INFORMATION IS INDICATED IN RED

AFRICAN REGION

Egypt**OFFICIAL**

18/06/09 - Confirmed H5 HPAI outbreaks in poultry, Dakahlia, Luxor (National authorities)

H5 HPAI outbreaks have been reported in:

- El Baghdadi Village, Elbayadia Distrit, Luxor Governorate: the birds (27 household unvaccinated chickens) were sampled on 16 June 2009 and tested positive on 16 June 2009.
- Zofr Village, Timai Elamdud District, Dakahlia Governorate: the birds (184 household poultry (ducks, geese, turkey) of unknown vaccination status) were sampled on 15 June 2009 and tested positive on 16 June 2009.

NON-OFFICIAL

17/06/08 – Suspected case of H5N1 infection in human, Kafr el Sheikh (News, GPHIN 5251372, News Provider: Manual Feed; News Source: Masrawy)

The Ministry of Health confirmed the case number 81 of avian influenza in a 5-year (or a 1 year and 5 months) old child from Kafr el Sheikh, who started having the symptoms on 15 June 2009 and was admitted to hospital immediately

suffering from fever and discharge after mixing with birds suspected of having avian influenza. He is being treated with Tamiflu and his condition is stable.

Cambodia

OFFICIAL

23/06/09 – Negative results from HPAI surveillance (UN System)

From 15 to 22 June 2009, the animal health hotline at the National Veterinary Research Institute received one call reporting sick and dead poultry in Kandal Province. A team of provincial and district veterinarians went to the affected village and decided that avian influenza was not the cause of the illness and death.

16/06/09 – Negative results from HPAI surveillance (UN System)

From 8 to 15 June 2009, the animal health hotline at the National Veterinary Research Institute received six calls from Kampt, Takeo, Kandal, Kampong Cham, Kampong Speu and Prey Veng Provinces asking general questions about avian influenza in poultry.

Indonesia

NON-OFFICIAL

21/06/08 – Suspected case of H5N1 AI infection in human, South Jakarta (News, Bird Flu Information Corner – translated from Pos Kota)

A five-year old child from Tegal Parang, South Jakarta, died on 19 June 2009. The child had returned from his relatives in Sukabumi, West Java and then visited other relatives in Pejaten Barat, South Jakarta, where chickens were reported to have suddenly died. On 8 June 2009 started showing symptoms and improved. The Livestock and Marine Subservice South Jakarta sampled birds around the victim's neighbourhood.

Viet Nam

OFFICIAL

22/06/09 - Confirmed H5N1 HPAI outbreak in poultry, Quang Ninh (National authorities)

From 18 June 2009, poultry has died in a small raising household in Lien Hoa Commune, Yen Hung District, Quang Ninh Province. On 20 June 2009, Quang Ninh Sub-Department of Animal Health (SDAH) took blood samples and

sent them to Regional Animal Health Office (RAHO) number II, which tested positive. As of 22 June 2009, outbreaks have been occurring in four households of Lien Hoa Commune, affecting 403 ducks, 97 Muscovy ducks and 4 chickens (out of a flock of 1,830 birds with 1,680 ducks, 100 Muscovy ducks and 50 chickens). The local steering committee on AI has culled the above flock and applied all needed preventive and control measure.

EUROPEAN REGION

Russian Federation

OFFICIAL

24/06/09 – Confirmed H5N1 infection in wild birds, Uvs Noor Lake (World Organisation for Animal Health – OIE)

The 58 cases suspected of H5N1 AI infection mention on the previous issue (16/06/08 - News) have been reported to OIE.

http://www.oie.int/wahis/public.php?page=single_report&pop=1&reportid=8220

NON-OFFICIAL

24/06/08 – Suspected cases of H5N1 AI seropositive wild birds, Altay Kray (News, GPHIN 5282000, News Provider: Factiva; News Source: IA REGNUM)

Antibodies to H5N1 AI were found in the blood of wild water-birds in Altay Kray: 231 samples from wild birds were analysed and 71 showed positive results. In Altay Republic: 188 samples were analysed, all negative. As for vaccination in poultry, in Altay Kray 786,750 birds were vaccinated and 17,083 birds were revaccinated. In Altay Republic: 92,964 birds were vaccinated and vaccination of adult birds is over.

16/06/08 – Suspected cases of H5N1 AI infection in wild birds, Uvs Noor Lake (News, GPHIN 4940803, News Provider: Factiva; News Source: ITAP TACC)

Fifty-eight Great Crested Grebes *Podiceps cristatus* found dead on the coast of Uvs Noor Lake, which lies in the border between Mongolia and the Russian Federation. This is the same place where an outbreak took place in June-July 2006 (a total of 3,749 birds, predominantly grebes, died). The outbreak started between 11 and 13 June 2009. Twenty-two samples were tested and seven of them were found to be positive for influenza A H5, later confirmed to be H5N1 by PCR test in Kemerovo.

Highly Pathogenic Avian Influenza H5 confirmed outbreaks

25 December - 25 June 2009

CONTACTS

The HPAI Situation Update compiles data on Highly Pathogenic Avian Influenza outbreaks. It is updated weekly, published in PDF format and automatically sent by email to a list of subscribers. We have received many requests to join the *HPAI Situation Update* distribution list. While we highly value the growing interest and wider distribution, it is hard for us to manage the increasing list of contacts. We would therefore appreciate if the contacts in each organisation/country could forward the document to all relevant people within their organisation/country.

The ECTAD HPAI Situation Update has been prepared by the EMPRES (Emergency Prevention Programme for Transboundary Animal Diseases) / GLEWS (Global Early Warning for Major Animal Diseases, including Zoonoses) team of the Animal Production and Health Division of the Food and Agriculture Organization of the United Nations.

Additional information on the outbreaks can be found in EMPRES-i web-based database (<http://empres-i.fao.org/empres-i/login>). Electronic version of the maps can be found on the website <http://www.fao.org/EMPRES/default.htm>.

For further information about the FAO HPAI Situation Update please contact the EMPRES/GLEWS team GLEWS@fao.org

DISCLAIMER

FAO compiles information from numerous sources (FAO representatives or country missions, FAO reports, OIE, official government sources, European Commission, FAO reference centres, laboratories and FAO collaborators) and produces these composite maps in a representative effort to provide full and accurate information.

FAO welcomes information to clarify disease or infection occurrence in areas that have not been properly depicted (with supporting documentation to make the required changes based on FAO validation and verification procedures). If you want to share information with GLEWS please send messages to GLEWS@fao.org

MAP: The maps represent occurrences of confirmed or suspected cases of H5 and H5N1 reported over the last 30 days (1st map) and last six months (2nd map). H5 cases are represented for countries where N-subtype characterization is not being performed for secondary cases or when laboratory results are still pending. The original data have been collected and aggregated at the most detailed administrative level.

TEXT: The text represents information obtained within the past 14 days indicating the original date of reporting or publishing of the information. Sources of information are included for easy reference. FAO does not guarantee the accuracy of non-official reports.

TABLES: The outbreaks presented in the tables are referring to the observation date (or the earliest clinical date known) and reported date of the first and last occurrence of an outbreak/case in a country. The affected populations refer to all populations ever affected. The reported date is the date when the occurrence of a disease has been confirmed by an official source. Outbreak of disease or infection means the occurrence of one or more cases of a disease or an infection in an epidemiological unit.
